Questions:

The item doesn't work fine.

Suggestions:

- 1.The item should use two battery for working fine, not one battery. Don't tear off the sticker on the back of the item.The induction port is a small silver round sticker , and the great round is for the voice port.
- 2.It is only applicable for small and medium sized pets.Some dogs need 7-14 days effected. Most dogs will need 4-6 weeks to effect. Some others may need a longer effective time.
- 3.Sensitivity settings: You should set a high or low settings according to the actual situation. High sensitivity: Although your pet only bark slightly it would issue the ultrasound;Low sensitivity: it would sense when dog bark greatly.
- 4.After setting, entry the collar to your pet neck, attention to that the dog throat should be near by the item back part and the tightness for collar on your dog.
- 5.A test methods: tapping on bark devices by hand,with a completed setting it will trigger the corresponding sound response.

Note:

It will be useful for small and medium-sized pets.
