Magnetic Jewelry

1. WHY MAGNET?

Magnetic therapy is currently being used by approximately 200 million people worldwide to help ease the pain of many different conditions such as arthritis, joint pain and swelling, hip pain, backaches, muscle pain, headaches, neck pain, knee pain, carpal tunnel, poor circulation, tennis elbow, tendonitis, diabetic neuropathy, and many other conditions. Magnets are also well known for helping people with the quality of their sleep.

When an injury happens and our tissue is damaged, positively charged ions in our blood move to the affected area, which causes an electromagnetic imbalance and pain and inflammation. To relieve the pain and inflammation, the electromagnetic field at the injury site must be restored to its normal balance. Applying a magnetic field to the area will help to restore the field to its normal state.

When positively charged Ions in our blood pass through a magnetic field they are accelerated, which causes heat, and increases blood flow. The magnetic field also relaxes surrounding muscle, connective tissues, and capillary walls which also increases blood circulation. Energized, nutrient-rich, and oxygenated blood cells help to heal damaged tissue and speed the healing process. Oxidation also occurs which helps to carry inflammatory toxins away from damaged areas which also help speed the healing process. Magnets also help prevent spasms that underlie many forms of pain by interfering with muscle contractions.

Magnets have been used therapeutically for centuries and there are numerous reports of significant benefit. Since the 1960's hundreds of studies have shown that magnetic therapy can be an effective method for relieving pain.

2. HOW LONG WILL IT TAKE

The amount of time it will take to work will depend on the type of condition, its severity, and how long you have had the condition. Each person may respond differently and often older people respond faster than younger people. For injuries that are acute, people often feel better in a few hours to a few days. It could take a few days or more to help with chronic pain and related conditions.

Copper Magnetic Jewellery

- Copper is an essential nutrient, particularly important during fetal development.
- Copper deficiency is more common than copper toxicity, although both conditions are possible.
- Copper is vital for collagen formation, which means that copper is essential for bone formation and repair, skin formation and repair, and growth/maintenance of many other tissues incorporating collagen.
- Copper is crucial for nervous system development and is involved in the synthesis of neurotransmitters.
- Copper is involved in maintaining the balance of other metals in the body, such as zinc and molybdenum.
- Copper is necessary for maintaining the elasticity of blood vessels.
- Copper is important for proper functioning of the immune system
- In addition to the activities listed above, copper participates in many other enzymatic chemical reactions in the body (e.g., activation of melanin, absorption of iron, free radical neutralization).
- Too much copper can damage the liver and kidneys.
- Vitamin C and zinc inhibit the body's absorption of copper.

Fashion Magnetics

*Stylish, Artistic, Fun,
& Unique fashion of the year!*

Enjoy the Magnetic Fashion and a multi

purpose designs that you can make a belt,

bracelet, necklace and many more! Show your

Creativity with your friends and loveones ...

Stainless steel Magnetic Jewellery

Stainless steel jewelry has become very popular in the last few years.

Stainless steel can be worn by many people who cannot wear other types of jewelry due to allergic reactions. All our jewelry is crafted of the highest quality stainless steel and the gold accents are 18K-3 micron plate. All our stainless steel jewelry pieces have 3,000 gauss North Pole magnets.

In recent years people have come to believe that the pull of magnets can help to ease pain and lessen inflammation. We make no claims of our magnetic jewelry. We simply offer that best quality and selection at down to earth prices.

Titanium Magnetic Jewellery

Titanium is a metallic element, which is well known for its excellent corrosion resistance and for its high strength. Titanium is as strong as steel, but is 45% lighter. Titanium is 60% heavier than aluminum, but twice as strong. Because of its strength, light weight, extraordinary corrosion resistance, and the ability to with stand extreme temperatures, titanium metals are used in aircraft, missiles, joint replacement implants, and body piercing.

Our titanium magnetic bracelets are superior quality and are finely crafted with 3,000 gauss neodymium, north polarity magnets on every link. These titanium magnetic bracelets are crafted using Commercially Pure (CP) Grade 2 Titanium, which is the most bio-compatible titanium grade of all. We use 3 micron 18K plating, applied using an IPG plating method resulting in an extremely durable finish.
