Description:
The new Mercedes S Class W221 and the new C Class (also a lot of the newer Mercedes) have a secured micro known as the HAVANNA made by NEC. At this moment it is not possible to read this chip.
At this moment the only solution is to fit a can blocker.
The W221 CAN filter which actually works properly without giving errors on the cluster. This item has identical connectors to the original Mercedes which means simple plug and play.
How to use the W221 Can Filter:
Simply Fit the cable in the car (totally un-detectable) and you can filter the required signal from the cluster to the rest of the memories in the car, and the cable will only filter the

signal you want to filter which means with the cable you don't get a dash full of error codes and flashing lights.
