

HKGEWU BIO MAGNETIC BRACELET

Key Technologies used in Bio-Magnetic Bracelets

Magnetic Therapy

- Magnets is a natural way of stimulating your body to combat pain.
 - Arthritis & rheumatism
 - Relive Joint and muscle pain
 - Shoulder pain
 - Back ache, headache and neck ache
 - Respiratory Problems: coughs & asthma.
 - Constipation
 - Inflammation
 - Insomnia
 - Jet lag Stress.
 - Restore energy
 - Increase blood circulation and release of oxygen form free radicals
 - Prevent or reverse infections states and degenerative diseases
 - Promote metabolic processing of toxins
 - Carpal syndrome
 - Naturally increase the production of melatonin and the growth of hormone naturall
- Improves immune power . enhances energy level. regulates blood pressure. enhances body ,brain & mental power . help all type of chronic & critical disease.improves top to bottom blood circulation fights against cancer. Magneto therapy is the application of magnets to the body to stimulate the nerves and create a better blood flow to various parts of the body. In turn, this helps the organs and glands to function better. Medicine itself is considered irrelevant as no medicine is orally fed or injected with magneto therapy. It is a clinical system in which the human ailments are treated with magnets of various size and strengths and use both north and south poles together or individually. Magnetized water and juices are also used in conjunction with magnet application.

NANO TECHNOLOGY

- Nano technology involves the manipulation of structures which deals with the creation and use of materials or devices at the level of molecules and atoms. Nano technology is the science of fabricating things smaller than 100 nanometers (a nanometer is one-billionth of a meter). Nano technology is not a separate industry, but an approach applied to multiple disciplines (chemistry, biology, physics etc). Building at the nano scale enables new interactions in materials, semiconductors, and biological agents. The new scale allows manipulation on the cellular level, which enable new discoveries in pharmaceuticals, bio- defense, and healthcare. The physical, chemical and biological properties of material at the nano scale differ in fundamentals and valuable ways. Nano technology creates new classes of structural materials that bring about lighter, stronger, smarter, cheaper, cleaner and more precise product

NEGATIVE IONS Technology

- Negative Ions are created naturally in nature by the energy associated with waterfalls, rolling surf and lightning. Negative ions are negatively charged particles form when an enough energy acts on a molecule to eject an electron. This displaced electron then attaches itself to a nearby molecule, which then becomes a Negative Ion.

1. Direct effects of Negative ion on human health

Activate cells: through cell membrane, it promote exchange of calcium and natrium inside and outside membrane, and keep cell's activity.

Blood purification: through cell's activity, it promote cell metabolism, and excreted hazardous waste and toxic substances from body.

Resume fatigue: eliminate illness factors, quickly recover physical strength.

Stabilize botanic nerve system: influence botanic nerve system to obtain rirritable ability, adjust function of botanic nerve system.

Strengthen resistance capacity to disease: stabilize emotion, increase C-Ball globins content, improve quantity and quality of leukin, and boost leukin's phagocytic function to the bacteria.

Restrain tumour cell growing: influence the composition and distribution of charged particles in blood, and increase cell's activity.

Absorb and shield electromagnetic radiation. Improve allergic physique: adjust the balance of botanic nerve system, strengthen the resistance to allergen material.

2.The main performance of negative ion for human body

The influences for nervous system: enhance pallium function and brain activity, excite nerve, improve work efficiency, and improve sleep quality. Negative ion also can strength the intensity of oxidation process of brain tissue, and help brain tissue to obtain much oxygen. Influences to cardiovascular system: negative ion has obvious effects to vascular expansion, restrain cholesterol content of serum, purify blood, avoid lipid depositing on vascular wall, improve blood circulation, relieve artery vasospasm, and achieve to maintain steady blood pressure.

Negative ion has big benefits for improving cardiac function and myocardial nutrition, and is good for the rehabilitation of hypertension and vascular diseases patients.

Influences to blood system: studies proved that negative ion has function to slow blood and extend clotting time, increase the oxygen content in blood, and thus is beneficial to oxygen transmission, absorption and utilization.

To improve NK activity to damage cancer cell; restrain the happening and transfer of cancer cell.

To restrain colorless leukotriene that could cause allergy and angry state, could be used in beauty and skin treatment. For example, skin burns can be quickly cured by negative ion. Negative ion also has analgesic effect.

To prevent artery probation or peroxide lipid of liver, too much ions may cause oxidation of axunge, quick oxidation of axunge will accelerate body aging.

Remove skin waste, increase activity of the skin, has significant effect for beauty.

From above we can conclude that negative ion is closely related to human's all systems, that is, human health, therefore it is will play a obvious role in human health.

FIR TECHNOLOGY

- Far infrared is the invisible band of energy that is part of the sun's spectrum. Far infrared is the segment that provides the greatest output from the sun and is split into three different wavelengths. Of these wavelengths, in the region of four to fourteen microns are the safest and most beneficial to life.

1.Direct effects of Negative ion on human health

Activate cells: through cell membrane, it promote exchange of calcium and natrium inside and outside membrane, and keep cell's activity.

Blood purification: through cell's activity, it promote cell metabolism, and excreted

hazardous waste and toxic substances from body.

Resume fatigue: eliminate illness factors, quickly recover physical strength.

Stabilize botanic nerve system: influence botanic nerve system to obtain irritable ability, adjust function of botanic nerve system.

Strengthen resistance capacity to disease: stabilize emotion, increase C-Ball globins content, improve quantity and quality of leukin, and boost leukin's phagocytic function to the bacteria.

Restrain tumour cell growing: influence the composition and distribution of charged particles in blood, and increase cell's activity.

Absorb and shield electromagnetic radiation. Improve allergic physique: adjust the balance of botanic nerve system, strengthen the resistance to allergen material.

TITANIUM

- Titanium has light texture, but is very hard and resistant to corruption. It doesn't get dark as silver, and can keep original color all the life in room temperature. Titanium has high resistance to corruption and fine stability, which makes it leaving no any influences for its essence after long term contacting with human, therefore, it can't bring any susceptibility to people, and became the only metal that without any influence to human botanic nerve and taste feeling. Titanium is also called "intimate-biology metal" by people.
- Titanium without any harm to human, titanium firstly caters for people's pursuit of health and long-life. Medical experiment testifies that titanium organs could be transplanted into human body, which can used to prove how miraculous titanium is for human.
