

LR 5200 Series Angular Contact Ball Bearing

Welcome to our online show room, thank you for looking!

Track roller bearing, guide bearing, U groove type bearing, V bearing.

LR5200 series of high-precision double row angular contact bearings

With cylindrical or cylindrical-shaped outer crown of the rail wheel - LR Series

1. This series of roller wheel, also known as support, can be used to guide or as a heavy-duty idler use, widely used to reduce the friction of the occasion.
2. Products as a cylindrical processing of circular R400 (model suffix with U), so that the use of the process in good force.
3. Wheel or the use of deep groove ball bearings double row angular contact ball bearing design and the internal structure of the thickening of the outer ring, so that the wheel has a higher carrying capacity.
4. Roller bearings with high-quality steel by heat treatment, precision grinding together, and filled in-house high-quality multi-purpose long-life oil imports. Wheel dust or metal dust cover rubber ring. Double China Bearing company can also provide with concentric and eccentric axis of the wheel axis, and some specifications may be provided of corrosion-resistant stainless steel roller.
5. To run a smooth, error LR Series wheel support rolling bearing in accordance with standards in addition to, the use of special processing technology to suit the inner ring is fixed, rotating the outer ring of the special work

We have following part numbers.
