Dear Valued Customer,

We are sending this letter to inform you that, Pentair Clean Air Systems, on April 27th, will be retiring the Mecair 600 and 700 range valves (VNP/VEM 608, VNP/VEM 708, VNP/VEM 614, VNP/VEM 616, VNP/VEM 714, VNP/VEM 716, VNP/VEM 720).

This choice has been driven by our utmost commitment to our customers: provide high quality and high performance products thus to offer high value for money.

We will be able to provide you a better product, guaranteeing higher quality, effective and quick service at even lower prices.

The Goyen valves from FS series will represent a viable alternative for many circumstances when the need is for a flanged style reverse pulse jet valve.

Your sales representative will be happy to provide you all the needed help for the transition toward the FS Goyen range or other available solutions.

Looking forward to continue supporting you and your business with our latest solutions.

Kind regards.
