The manufacturing process of DEM's toner cartridges is in full compliance with ISO 9000 quality control standards. All recycled toner cartridges must go through the very strict inspection procedures of DEM. After passing the inspection, the recycled toner cartridges are inspected, and then the toner cartridges are removed. Cleaning, parts replacement, adding new toner, assembly, quality inspection and other procedures only complete the production.

The printing color of the product is realistic, and the printing effect is comparable to the original. Using high-quality imported sponge, high density, uniform density distribution and good elasticity;

## Good cartridge performance

The jetting is smooth and does not block the print head, and the machine is cleaned zero. The cooperation of the sponge and ink of each ink cartridge is tested and adjusted separately.

## Environmentally friendly recycled toner cartridge

The environmentally friendly recycled toner cartridges in toner cartridges are compatible and consist of different machine parts and components. Each step requires fine mechanical engineering cooperation to reach the international level.
