Physical properties of GLYSANTIN® coolants

Because the main physical properties of GLYSANTIN® coolants relate to the mixing ratio of ethylene glycol/water, we have compiled this data under normal pressure in the range from -40 to +100 °C for different concentrations. In principal these are valid for all ethylene glycol based GLYSANTIN® products. Minor differences between these values are based on the different additive packages of each coolant.

Note:
GLYSANTIN® GG40® is not covered by these graphs due to the glycerine content.

Da die wesentlichen physikalischen Eigenschaften der GLYSANTIN® Kühlerschutzmittel auf das Mischverhältnis von Ethylenglykol/Wasser zurückzuführen sind, haben wir eine Sammlung von Daten unter Normaldruck im Bereich von -40 bis +100 °C für unterschiedliche Konzentrationen erstellt. Diese sind prinzipiell für alle ethylenglykol-basierten GLYSANTIN® Produkte gültig. Geringfügige Unterschiede zu diesen Werten sind auf die unterschiedlichen Additivpakete der einzelnen Kühlmittel zurückzuführen.

Zur Beachtung:
GLYSANTIN® GG40® ist aufgrund des Glycerin-gehaltes nicht Gegenstand dieser Diagramme.

Density

of mixtures of GLYSANTIN® and water as a function of temperature and concentration.
