# 02

The cork particles are very small, the cloth surface is very clean, and It looks very high-end.  
It is very suitable for custom patterns.

# 03

Optional 100% natural rubber bottom and premium TPE bottom. Size, position line, pattern, logo can be customized.

01

Cork is a 100% biodegradable resource which comes from a plant that is rapidly renewable and sustainably collected. The natural rubber is also from a plant and completely biodegradable.

02

This durable yoga mat is designed to withstand a variety of fitness exercises, such as Ashtanga, Vinyasa, Power, Hatha, Bikram, hot yoga, Pilates, Barre, etc.

03

Optional 100% natural rubber bottom and premium TPE bottom. Size, position line, pattern, logo can be customized.

01

The colored particles inside this colorful yoga mat are EVA particles.

02

This mat is very fashionable, popular with young people

03

Optional 100% natural rubber bottom and premium TPE bottom. Size, position line, pattern, logo can be customized.

# 01

There is flowing pattern, the grain looks natural, and high-grad.

# 02

The cleaning is very simple. Dust will be cleaned with a damp rag. If there is a serious stain, just gently polish it with fine sandpaper.

# 03

Optional 100% natural rubber bottom and premium TPE bottom. Size, position line, pattern, logo can be customized.

# 02

Optional 100% natural rubber bottom and premium TPE bottom. Size, position line, pattern, logo can be customized.

# 01

This one, like a bamboo texture, is also very distinctive. This line feels very natural and rustic.

# 03

Special sticky non slip texture on the bottom, more durable than regular yoga mats and slip resistant to tearing and deformation.

• PART 02 Product-HZ-CB

# 02

Cork particles have large particles and small particles

# 01

100% Nature & Eco-friendly Cork  
Without doing harm to tree source and the environment. Compare to BPA, plastics, PVC and petroleum material, it's more natural and eco-friendly, no odour.

# 03

Various sizes can be chosen and logos can be customized

• PART 02 Product-HZ-CB-1

01

The style is classic and fashionable

hand-washed

machine-washed

02

With sturdy zipper and reinforced seams.  
Equipped with comfortable and adjustable handles  
for easy carrying even with a heavy load.

03

It features a very simple design for a variety of styles and wearing options.  
Equipped with adjustable handles,  
combining a streamlined three-way design for shoulder or handbag use.

# • PART 02 Product-HZ-CB-2

## 01

Large capacity,  
Comes with large space to store  
up all your needs

## 02

One zipper pocket, one open pocket  
One for valuables, one for other things  
Wide shoulder strap, for easy carrying  
even with a heavy load.

## 03

Casual style.  
Stylish yet durable and practical.

# Cork: What is it?

Cork is the bark of the cork oak (*Quercus Suber L.*), which means that it is 100% natural plant tissue. It consists of a honeycomb of microscopic cells filled with a air-like gas and coated mainly with suberin and lignin. Other compounds are identified in its chemical composition, although in less quantity, such as polysaccharides, ceroids and tannins.

A single cubic centimetre of cork contains almost 40 million cells - around 800 million in a single natural cork stopper.

Harvested every nine years, without any tree being felled during the process, cork gives rise to an endless array of products, from the traditional to the most innovative and unexpected. The main product is the cork stopper, but not all cork qualifies to be transformed into that noble object.

It takes each cork oak 25 years before it can be stripped for the first time and it is only from the third stripping (at 43 years of age) that the cork, then known as «amadia», has the high standard of quality required for producing cork stoppers. The first two harvests – the «virgin» cork and «secundeira» cork –, as well as that removed from the base of the tree, becomes the raw material for insulation, flooring and products for areas as diverse as construction, fashion, design, health, energy production and the aerospace industry.

The cork is harvested by specialized professionals, always between May and August, when the tree is at its most active phase of growth and it is easier to strip without damaging the trunk. The cork oak is the only tree whose bark regenerates, acquiring a smoother texture following each harvest. Over the course of its lifetime, which on average lasts 200 years, it may be stripped around 17 times.

# Natural, versatile and sustainable

Cork is a rare material which is so perfect that no industrial or technological processes have yet been able to replicate.

## VERY LIGHT

Over 50% of its volume is air, which makes it very light – it weighs just 0.16 grams per cubic centimetre and can float.

## ELASTIC AND COMPRESSIBLE

It is the only solid which, when compressed on one side, does not increase in volume on another; and as a result of its elasticity it is able to adapt, for example, to variations in temperature and pressure without suffering alterations.

## IMPERMEABLE TO LIQUIDS AND GASES

Thanks to the suberin and ceroids contained in the cell walls, cork is practically impermeable to liquids and gases. Its resistance to moisture enables it to age without deteriorating.

## THERMAL AND ACOUSTIC INSULATOR

Cork has low conductivity to heat, noise and vibration. This is because the gaseous components contained in cork are enclosed in small impermeable compartments, isolated from each other by a moisture-resistant substance.

## FIRE RETARDANT

Cork is also a natural fire retardant: it burns without a flame and does not emit toxic gases during combustion.

## HIGHLY ABRASION RESISTANT

Cork is extremely resistant to abrasion and has a high friction coefficient. Thanks to its honeycomb structure, its resistance to impact or friction is greater than that of other hard surfaces.

## HYPOALLERGENIC

Because cork does not absorb dust, it helps protect against allergies and does not pose a risk to asthma sufferers.

## NATURAL TOUCH

The natural texture of cork combines softness and flexibility to the touch with a naturally uneven surface. The variable degree of irregularity is given by the type of cork used and the finish chosen.
