

Diamond Tools for Metal-Working Applications

The diamond tools can cut and grind an extremely wide range of materials such as:

High & Low Carbon Steel

Hard Facing Alloys

Ductile Iron

Casting Iron

Rail Track

Steel Section, Bar & Tube

Wood, Plastic, FRP, PVC,

Weld seam Removal

These tools are made with diamonds, the hardest natural material known to mankind.

manufactured by a unique brazing technology that allows a high concentration of diamonds to be chemically and mechanically bonded on to the steel surface.

The resulting tool life is far greater than the standard abrasives such as aluminum oxide, zirconia alumina, or silicon carbide
