

## Are you bothering by the mouse? Hope these tips can help you.

### National news about rat plagued recently

1. [World Wide Web Roundup] The bathroom is a safe place for it? In county cork Ireland, it's not like that. According to French media "Franceinfo. Fr" reported on April 21, rat with severe in recent weeks in Ireland region, a men's buttock was bitten by a mouse when he was in the toilet.

2. According to England "Daily Mail" reported on April 14, Rome mayor Antonio Razzi proposed solve the city mouse overflow problem with 500000 cats.

Local media reported that due to the problems of recycling, the Rome mice have proliferated in recent years. Experts estimate that the number of mice Rome could be as high as 6 million, which is twice of the city's population.

## **Mouse what harm?**

Mouse extremely easy to adapt to the human living environment, thus become the main harmful animals. Mice haunt the place such as sewers, toilet, kitchen, move back and forth in dirty places and clean place, through the mouse foot, body hair, and stomach carries to spread pathogens.

In addition to the human, mouse is the most rapidly and most successful reproduction in mammals. Such as the mice often appear in human's life, they can pregnancy up to eight times a year, each time can born pups four to seven.

Rats like grinding their teeth except consumption or pollution of food, so the packaging materials or construction equipment which destroyed by rats are quite considerable. According to statistics, the United States has a quarter unexplained fire may be caused by rat damage the wires.

Rats can also spread the Plague, Epidemic Hemorrhagic Fever, Leptospirosis and 30 many kinds of diseases, serious harm to people's life. Since SARS cases, many experts believe that rats may be related to the SARS epidemic. As a result, people begin to pay more and more attention on the work of eliminate rats.

**What should we do when there are some mice at home?**

- 1. Create an environment not fit for rat's survival.**

Mice need water, food and hidden habitat conditions in order to survive and reproduce. So, create an environment that is not suitable for their survival can firstly reduce the number of mice, and is also helpful for the further work. So we need to improve sanitation, remove the weeds & random stacking items around the residence. Often clean the indoor and outdoor sanitation, all sorts of appliance sundries in order, check often, do not make rats nesting.

## 2. **Exterminate rats with chemical method.**

This method is also called the rodenticide deratization method. General rodenticide, mainly organic compound, followed by inorganic compounds and wild plant and its extract. Add it into the rat bait, to achieve the goal of poisoning mice. This way is easy to use and work well, but it have strong toxicities, which may be harmful to the other pets at home.

## 3. **Exterminate rats with biological method.**

Use rat's natural enemies to exterminate them. There are many natural enemies of rats, such as the weasel and the cat, hawk, owl,

snakes etc. So, protect these rodents predators is advantageous to reduce rat. We can also feed a cat to prevent rat infestation.

#### 4. **Exterminate rats with physical method.**

- ① Sticky mouse board, Mouse trap
- ② [Ultrasonic mouse repellent](#)

Using the ultrasonic pulse to interference and stimulate the rat's auditory system, make them unbearable and feel panic and anxiety. After a few days using, the rats will loss of appetite, escape, even twitch symptoms. So they will leave this environment make them uncomfortable, besides, this way is can also be used to repel mosquitoes, cockroach, spider etc.

- ③ [Electric mouse zapper](#)

When this device ensnared a mouse, the LED light on the top will flash and alarm. At the same time, it will produce cycle 5 times of high pressure to ensure that quickly kill the mice. Put it on the place that mouse haunt often, it can also used in the roof and ceiling as it is equipped with a LED extension cord used to flash alarm.
