Re: Material Obsolete Notice

To whom it may concern,

With reference to subject above, I would like to inform you that R-7 & R-7-02 will be obsolete in Mar-2010. R-7-120NA & R-7-120BL are the replacement material grades which have better electrical properties, lower offgassing and higher UL temperature than R-7 & R-7-02. Both grades are under the same UL file (E233198).

Please find attached data sheet and UL file for your reference.

Should you have any question, please do not hesitate to contact us.

Sincerely,

Henry Wong
Engineering Polymer - Sales Engineer
